Case Narrative

COLUMBIA ANALYTICAL SERVICES, INC.

Client:	Treadwell and Rollo, Inc.	**Service Request No.:**	K0701703
Project:	Presidio of San Francisco	**Date Received:**	03/03/07
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier III validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Two water samples were received for analysis at Columbia Analytical Services on 03/03/07. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

General Chemistry Parameters

No anomalies associated with the analysis of these samples were observed.

Total Metals

No anomalies associated with the analysis of these samples were observed.

Diesel Range Organics by EPA Method 8015B

No anomalies associated with the analysis of these samples were observed.

Gasoline Range Organics by EPA Method 8015B

No anomalies associated with the analysis of these samples were observed.

Organochlorine Pesticides by EPA Method 8081A

Continuing Calibration Verification (CCV) Exceptions:
The primary evaluation criterion was exceeded for a few analytes in CCV 0321F041. In accordance with CAS standard operating procedures, the alternative evaluation specified in the EPA method was performed using the average percent recovery of all analytes in the verification standard. The standard meets the alternative evaluation criteria.

Matrix Spike Recovery Exceptions:
Insufficient sample volume was received to perform a Matrix Spike/Matrix Spike Duplicate (MS/MSD). A Laboratory Control Sample/Duplicate Laboratory Control Sample (LCS/DLCS) was analyzed and reported in lieu of the MS/MSD for these samples.

Lab Control Sample Exceptions:
The lower client specific control criterion was exceeded for Heptachlor and Aldrin in samples Laboratory Control Sample KWG0703478-1 and Duplicate Laboratory Control Sample KWG0703478-2. However, the analytes in question were within CAS statistically derived limits. The data is flagged to indicate the problem. No further corrective action was necessary.

Approved by _____ **Date** 4/2/07

Relative Percent Difference Exceptions:
The Relative Percent Difference (RPD) for alpha-BHC and Aldrin in the replicate Laboratory Control Sample (LCS) analyses (KWG0703478-1 and KWG0703478-2) was outside control criteria. Note that these analytes were not detected in the associated field sample. The data is flagged to indicate the problem.

No other anomalies associated with the analysis of these samples were observed.

PCB Aroclors by EPA Method 8082

Sample Notes and Discussion
The Laboratory Control Sample KWG0703477-1 was lost during the extraction. A duplicate was also extracted with this batch and shows acceptable recoveries. At the request of the PC sample was not re-extract. Sample is reported with one LCS and no replicate data.

No other anomalies associated with the analysis of these samples were observed.

Volatile Organic Compounds by EPA Method 8260B

Initial Calibration (ICAL) Exceptions:
The primary evaluation criterion was exceeded for Acetone, cis-1,3-Dichloropropene, trans-1,3-Dichloropropene, and Bromoform in ICAL ID CAL6077. In accordance with CAS standard operating procedures, the alternative evaluation specified in the EPA method was performed using the mean Relative Standard Deviation (RSD) of all analytes in the calibration. The result of the mean RSD calculation was 8.6%. The calibration meets the alternative evaluation criteria. Note that CAS/Kelso policy does not allow the use of averaging if any analyte in the ICAL exceeds 30% RSD.

The CAS minimum relative response factor criterion for 2-Butanone (MEK) was not met in ICAL ID CAL6077. In accordance with CAS standard operating procedures, a Method Reporting Limit (MRL) check standard containing the analyte of concern was analyzed each day of analysis. The MRL check standard verifies instrument sensitivity was adequate to detect the analyte at the MRL on the day of analysis. Because the sensitivity was shown to be adequate to detect the compound in question, the data quality is not significantly affected. No further corrective action was appropriate.

No other anomalies associated with the analysis of these samples were observed.

Polynuclear Aromatic Hydrocarbons by EPA Method 8310

Continuing Calibration Verification (CCV) Exceptions:
The primary evaluation criterion was exceeded for the analyte Benzo(g,h,i)perylene in the FLD signals for CCVs KWG0704189-1, KWG0704189-2 and KWG0704189-3. In accordance with CAS standard operating procedures, the alternative evaluation specified in the EPA method was performed using the average percent recovery of all analytes in the verification standard. The standard meets the alternative evaluation criteria with respect to these analytes.

Sample Confirmation Notes:
The confirmation comparison criteria of 40% difference for Dibenz(a,h)anthracene was exceeded in sample Batch QC MS. The higher of the two values is reported because no evidence of matrix interference was observed.

Matrix Spike Recovery Exceptions:
The matrix spike recovery of Dibenz(a,h)anthracene for sample Batch QC was outside control criteria. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicates the analytical batch was in control. The matrix spike outlier suggests a potential high bias in this matrix. The sample did not contain the analyte in question. No further corrective action was appropriate.

No other anomalies associated with the analysis of these samples were observed.

CAS Standard Identification Codes and Abbreviated Footnotes for Chromatograms

G1 Sample was analyzed past the end of recommended holding time. See Nonconformity sheet.
G2 Sample was reanalyzed past holding time. Initial analysis was performed within recommended holding time.
G4 Sample was received past the end of recommended holding time.
R1 High RPD is because the duplicate sample results are less than three times the method reporting limit.
i MRL is elevated because of matrix interferences and the sample required diluting.
F Sample filtered primary to analysis.

CAS Standard Identification Codes and Abbreviated Footnotes for Chromatograms

G1 Sample was analyzed past the end of recommended holding time. See Nonconformity sheet.
G2 Sample was reanalyzed past holding time. Initial analysis was performed within recommended holding time.
G4 Sample was received past the end of recommended holding time.
R1 High RPD is because the duplicate sample results are less than three times the method reporting limit.
i MRL is elevated because of matrix interferences and the sample required diluting.
F Sample filtered primary to analysis.

Appendix from EXT-3535
For Extracting 8081/8082 Compounds in water by
EPA Method 3535A

1. Mark the level of the sample on the sample container for determination of sample volume.
2. Adjust pH of the sample to 2 using H2SO4. Be careful not to go below 2, as this will cause breakdown of the extraction disk.
3. Add between 2mL and 5mL of methanol to each sample, and shake well.
4. Add 100uL of 8081/8082 surrogate to all samples and 50uL of 8081 spike to Pest QC and 50uL of 8082 spike to PCB QC.
5. Shake sample to mix.
6. Prepare sample bottles with Horizon cap adapters and verify seal
7. Run purge method 8081.4 on extractors 2 times.
8. Assemble extractors using UCT brand C18 cartridges.
9. Load extraction program 8081.6 on the Horizon control box.
10. Load samples onto Horizon extractors and slowly turn clockwise until sample seal is broken. (Glug effect)
11. Start extraction program.
12. Run purge method 8081.8 on extractors between samples.
13. Take VOA vial extract to Dry Disk station. Place dry disk in vacuum system and rinse once with DCM, then condition with one Hexane rinse. Place turbovap tube into place for collection. Pour sample onto the Dry Disk and rinse VOA vial 2 times with Hexane. After sample has been vacuumed from water, agitate water with one more Hexane rinse.
14. Place sample into tubovap and concentrate with a nitrogen flow just strong enough to create a vortex.
15. Concentrate Hexane and take to a 2mL final volume in Hexane. Split, if necessary, pesticide from PCB portion using a 1mL pipette and placing pesticide aliquot in a yellow autosampler vial. After remaining PCB aliquot has had an Acid clean-up, hexane portion is removed and then placed in a green autosampler vial.
